

MERCURY FREE BABY.org

Want a child as healthy as can be? Then keep your baby mercury-free!

Mercury is especially dangerous to children, before and after birth.

Mercury can interfere with a child's health and development.

Mercury is in places you wouldn't expect...

Protect your child from Mercury in—

“Silver” Dental Fillings

and

Flu Shots (& other vaccines)

by—

- having “silver” (amalgam) fillings, which contain about 50% mercury, replaced before pregnancy by a trained mercury-free dentist
- refraining from placement and/or removal of “silver” fillings during pregnancy
- choosing only white resin (composite) fillings for you and for your growing child
- asking for your right to informed consent from your dentist regarding the risk of “silver” (amalgam) fillings

- choosing only mercury-free vaccines, including flu shots, for yourself during pregnancy
- choosing only mercury-free vaccines, including flu shots, for your infant and growing child
- asking for the right of informed consent from your obstetrician and pediatrician in regard to mercury (Thimerosal) in vaccines
